# PeopleKey Nexus

## Track Employee Attendance
## Anytime, Anywhere, Anydevice

The on-going drive for efficiency improvements and cost reduction means organisations need tools that increase productivity. Busy managers want increased visibility. They need to know who's at work in all locations, which employee's didn't arrive and what shifts need to be filled before customer service is impacted. Peoplekey Nexus provides all of this and more!

### What is PeopleKey Nexus?
It's an innovative tool that tracks employee attendance, and stores that information in the "Cloud". The data is available anywhere and of course anytime. Registered users can access the system from any internet enabled device. It's easy to use and a very cost effective solution for growing businesses.

### Mobile Clocking
Employees are becoming increasingly mobile, they are on the road or working across job sites. PeopleKey Nexus converts any smart-phone into a clocking device using GPS Location tracking services. Staff that are on the road can now clock-in/out without returning to the workplace, this provides increased efficiency and visibility to management. A Manager will be able to see who's at work and who isn't, from anywhere in the world.

## Powerful Reporting

Powerful reporting in Peoplekey Nexus allows you to view events as they occur. Know who's on-site and who's not. Powerful filtering makes it easy to find the information you need. Data can be effortlessly exported to a PDF file or spreadsheet for further manipulation.

## Cloud Based Solution

PeopleKey Nexus is a subscription based "Cloud" solution that allows for the clocking of employee start and finish times to PeopleKey's "Cloud" based servers. PeopleKey Nexus is underpinned by the powerful Microsoft Azure platform which offers unrivalled security and support.

## Biometric Clocking

The PeopleKey range of clocking devices lead the market in biometric technology. They offer ultra fast processing times and are easy to use and maintain. Secure clocking to the "Cloud" via any Internet connection, further enhances its versatility.

## Payroll Integration

Powerful integration with most Payroll solutions means that manual payroll calculations and data entry are eliminated. Wages can be automatically calculated based on actual hours worked and overpayments eliminated. Shifts can be assigned rules and job codes for accurate job costing.
